	<p>time taking into consideration a derivative action time.</p> <p>2.1.3 The present invention can therefore be considered to address the problem of improving the shifting characteristics of a gearbox during an upshift procedure.</p> <p>2.1.4 The solution proposed in claim 1 of the present application cannot be considered inventive (PCT Article 33(3)) for the following reasons:</p> <p>D2 discloses a method in which an engine brake is switched off prior to the calculated shut-down time taking into consideration a derivative action time (see paragraph 26 and claim 1, feature (c)). This concept has the advantage of improving the switching characteristics during an upshift procedure (column 6, lines 12-14). A person skilled in the art would therefore apply the concept to the method known from D1 in order to solve the aforementioned problem, without thereby being inventive.</p> <p>3 DEPENDENT CLAIMS 2-7</p> <p>Claims 2-7 do not contain any features which, in combination with the features of any claim to which they refer, meet the PCT requirements for inventive step.</p>
